# R TUTORIAL - VTT (Lecture 2)

Oguzhan (Ouz) Gencoglu

VTT Technical Research Center of Finland

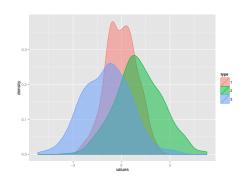

3 May 2016

- 1 Previously
- 2 More Data Wrangling
- 3 Reading & Writing Data
- 4 Plotting and Graphics with R
  - Base Plotting System
  - Lattice Plotting System
  - Grammar of Graphics (ggplot2) Plotting System
  - External Packages
  - Graphing Roadmap
- 5 Statistical Tests & Distributions
- 6 Next Lecture

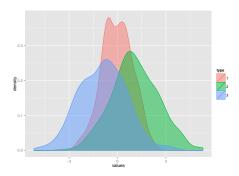

### What was covered?

Introduction to R - What? Why? How?

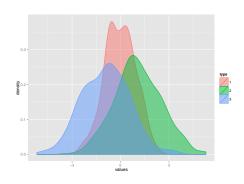

### What was covered?

- Introduction to R What? Why? How?
- Practical issues

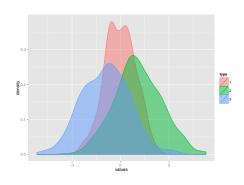

### What was covered?

- Introduction to R What? Why? How?
- Practical issues
- Frequently used functions

### What was covered?

- Introduction to R What? Why? How?
- Practical issues
- Frequently used functions
- R paradigm data frames, exploratory analysis etc.

# plyr, dplyr, apply's

apply\_functions.R, more\_data\_wrangling.R

# Reading & Writing Data

read\_and\_write\_data.R

Base Plotting System Lattice Plotting System Grammar of Graphics (ggplot2) Plotting System External Packages Graphing Roadmap

### Base Plotting System

base\_introduction.R, base\_exploratory.R, maps\_example.R

<u>Idea:</u> High-level graphing function followed by low-level modifying functions + default parameters

### Base Plotting System

base\_introduction.R, base\_exploratory.R, maps\_example.R

Idea: High level graphing function followed by level modifying

<u>Idea:</u> High-level graphing function followed by low-level modifying functions + default parameters

Most common high-level ones: plot, hist, barplot, boxplot, curve

## Base Plotting System

#### base\_introduction.R, base\_exploratory.R, maps\_example.R

<u>Idea:</u> High-level graphing function followed by low-level modifying functions + default parameters

Most common high-level ones: plot, hist, barplot, boxplot, curve Most common low-level ones: lines, text, axis, points, title, mtext

### Base Plotting System

#### base\_introduction.R, base\_exploratory.R, maps\_example.R

 $\underline{\mathsf{Idea:}}$  High-level graphing function followed by low-level modifying functions + default parameters

Most common high-level ones: plot, hist, barplot, boxplot, curve Most common low-level ones: lines, text, axis, points, title, mtext Global graphics parameters: par()

#### Lattice

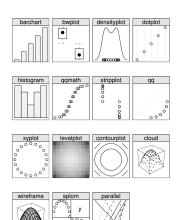

Useful for *trellis graphs*, i.e., graphs that display a variable or the relationship between variables, conditioned on one or more other variables.

formula argument:  $\mathbf{y} \sim \mathbf{x} \mid \mathbf{p} * \mathbf{r}$  where y and x are primary variables p and r are conditioning variables

#### Lattice

Useful for trellis graphs, i.e., graphs that display a variable or the relationship between variables, conditioned on one or more other variables.

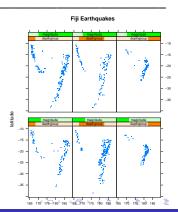

formula argument: y ~ x where y and x are primary variables p and r are conditioning variables

## Lattice Introductory Example

#### lattice\_introduction.R, lattice\_example.R

Plot Fiji earthquakes, i.e., plot latitude vs. longitude conditioned on depth and magnitude.

# Grammar of Graphics (ggplot2)

#### ggplot2\_introduction.R

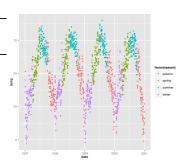

Plot galaxy clusters info with error intervals.

# Grammar of Graphics (ggplot2)

#### ggplot2\_example.R

Several simple plot examples on the same dataset.

# **Graphing Roadmap**

Task	<b>Graphing Tool</b>
Exploratory Analysis	base
Simple 2D Plots	base
Quick Plotting	base
Trellis Graphs	lattice
Formal Plotting	ggplot2
Beautiful (?) Plots	ggplot2
Unconventional Plots	external packages

Graphing Roadmap

#### Statistical Tests & Distributions
